EDUCATION

University of Central Florida

Orlando, FL

Pursuing Bachelor's Degree in Computer Science

Dec. 2027

- Completed Courses: Intro to C, Computer Science 1, Calculus 1, Object Oriented Programming, Computer Logic and Organization, Calculus 2, System Software, Introduction to Discrete Structures, Computer Science 2, Web and User Experience and Design, Processes for Object-Oriented Software Development, Topics in Cybersecurity.

PROJECTS

BlowOffSteam | *NextJS, React, TailwindCSS, FireBase, Visual Studio Code, Git*

Sep. 2026

- Passion Project developed by 3 people to further develop skills in full-stack web development, where the Primary purpose is to track user playtime of games on the Steam platform, then ranking users based on their amount of playtime, where the less a user plays, the higher their rank.
- Contributed to the backend, including the ranking system and points storage, and user communication

UGotta | *MongoDB, Express.js, React.js Node.js, Dart, Flutter, Visual Studio Code, Git*

Mar. 2026 - Apr. 2026

- Developed in a 5 week period and hosted remotely using a DigitalOcean server for the final project of the Processes of Object-Oriented Software Development class of Spring 2026
- Comprised of a 6-person team developing an app where the primary purpose is to save recommendations in a diary-like format, then communicate and share those recommendations with friends the user can make in the app.
- Contributed primarily to the front end aspects of the accompanying mobile app, including maintaining parity between the website and app, cross-platform mobile device compatibility, text input and formatting, and thorough testing and debugging of the app.

HandRaising | *Python, OpenCV, YoloV8, React.js, Visual Studio Code, Git*

Oct. 2025

- Project developed in a 36 hour period by a 4-person team for the Knight Hacks VIII hackathon.
- Primary purpose is to assist students by notifying professors when they have had their hands raised for an extended period of time to prevent inconvenience for students and assist professors in answering questions during lectures.
- Contributed various features, including the video capture using the OpenCV library and the gesture detection using a pre-trained gesture-detecting model provided by the YoloV8 Library, saving at least 8 hours of time that would have been necessary in training a model from scratch.

EXPERIENCE

Undergraduate Research Assistant

Dec. 2024 – Jul. 2025

University of Central Florida

Orlando, FL

- Research funded and hosted by the UCF Excel Program initially for Spring 2025, and extended to Summer 2025.
- Member of a project that worked to fix and develop software for a wheelchair-mounted robotic arm to be utilized by those with disabilities to assist with daily tasks.
- Accomplished using custom code developed in C, C++, and Matlab to communicate between a computer, robotic arm, and camera attached to the arm, using CxUtils to communicate between all 3 and OpenCV to receive and interpret camera data, and fixed the UI developed in C++ using the FLTK library, providing 3 modes of operation.

UCF Knight Hacks

Jan. 2025 – Present

University of Central Florida

Orlando, FL

- Student-led organization focused primarily on teaching Software Engineering and other Computer Science, Computer Engineering, and Information Technology concepts, and allowing for experiential opportunities.
- Participated in their semester-long project-building and mentorship programs for career and educational guidance
- Provided opportunities to attend 4 hackathons, allowing for networking and skill development through project building and working in teams.

TECHNICAL SKILLS

Languages: Java, C, C++, JavaScript, HTML, CSS, Dart

Frameworks: NextJS, TailwindCSS, React, Flutter

Developer Tools: Git, GitHub, Visual Studio Code, Visual Studio, IntelliJ, CLion

Libraries: FLTK, CxUtils, OpenCV, YoloV8
